

IT COMPLIANCE FOR BUSINESSES IN REGULATED INDUSTRIES

Helping you meet legislative and industry IT expectations compliance protocols and management you can trust

The list of industries that must meet compliance standards continues to grow. IT compliance is complex and requires the assistance of cybersecurity professionals. Our team can help you meet compliance expectations and introduces the best practices necessary to help you remain within legal and industry mandates.

Does your current IT provider talk with you about compliance? If you are in a regulated industry, that conversation must be comprehensive and ongoing.

Why? Because compliance mandates continue to evolve. You must consider your regional and national legislation along with compliance requirements of:

- Industry regulators
- Other regions and countries in which you do business
- Vendors requirements
- Customer expectations

Here's how we do it: a three-pronged model

- **Security** – auditable IT systems and data protection best practices
- **Operations** – practices and procedures aligned with IT compliance mandates
- **Employee Training** – education focused on teaching employees to work in a compliant manner

Your business needs an IT partner that prioritizes IT compliance with legislation and industry standards.

IT security measures are not enough to protect you from violation fines and penalties. You must take steps specific to your industry's compliance regulations, geography, and customer base.

Make sure every aspect of your IT workflow—on-site, cloud, and mobile—is compliant.

1. Data acquisition
2. Data storage
3. Data security
4. Internal data use
5. Data access
6. Data retention
7. Cybersecurity protocols

Why partner with us for compliance management?

- You want to mitigate your exposure to non-compliance audits and penalties.
- You may have customers and suppliers that require you to comply with specific standards.
- You may have nuanced industry-specific compliance requirements.
- Your growth plans may push you to comply with the IT compliance mandates of other regions and countries.
- You want to proactively protect customers' privacy and your brand's reputation.
