

PASSWORD MANAGEMENT SERVICE

Letting employees manage their password is risky. Let us help you minimize that risk.

.....

Secure passwords are essential for keeping sensitive data and key IT systems safe from hackers and other threats.

If your employees are re-using the same passwords across multiple accounts, or you don't know who has access to which systems, your whole business could be at risk.

Work with us to reduce that risk with our easy-to-use password management tools and service.

One Portal for all your Password needs

- Save time with instant credential insertion – no more remembering lists of passwords
- Centrally control employee access to mission-critical systems
- Easily terminate access to all systems following an employee's departure
- Track and record all system access to help meet compliance audit requirements

Convenience, Ease, and Peace of mind

1. Comprehensive safety generates strong passwords automatically
2. One-click logins automatically insert credentials
3. Self-serve access control allows you to revoke system access in-house

Here's How It Works

Our password management service has been designed to be as secure, efficient, and user-friendly as possible. It works by creating a one-stop portal for all your company's passwords. Even massive corporate databases can now be locked down with just a few clicks. When it comes time to log in, our software automatically inserts credentials, saving valuable time for your employees

Users:

- Log into websites with a single click
- Set up folders to organize passwords
- Generate strong, unique passwords
- View company-level passwords
- View passwords unique to their operating group or business unit
- Add and edit passwords for personal accounts – inaccessible to all other users, admins, and even our team for complete control and privacy

Joint Administration for Control and Compliance:

- View audits and reports on password-related activity
- Terminate system access for employees who leave the company
- Share approved passwords with our team automatically
- Set up passwords to auto-expire and auto-generate strong, new passwords
- Implement two-factor authentication (2FA) policies

Take control of your passwords and system access—and get peace of mind.
